- Smoked

Effects of Amphetamines

Short Term

- Dilated Pupils
- Increased Blood Pressure
- Increased Heart Rate
- Decreased Appetite
- Dry Mouth
- Tremors
- Dizziness / Nausea
- Irregular Heartbeat
- Loss of Coordination
- Sudden Collapse
- Loss of Consciousness

Effects of Amphetamines

Long Term

In addition to those listed below amphetamine use can cause the users to have long term problems with high blood pressure, irregular heartbeats, and severe sleeping disorders.

Malnutrition -

Because Amphetamines reduce the users appetite, they are less likely to eat properly and because of this are less resistant to infections. Chronic Psychosis - Symptoms include paranoia, delusions, and bizarre behavior. This can be seen as early as 1 week after the user has stopped using.

Chronic

Anxiety/Tension - To combat this users often turn to alcohol and barbiturates for help. Chronic Anxiety may also lead to violent behavior. Brain Damage - Long term use of Amphetamines can cause damage to the brain, specifically areas that deal with memory and everyday thinking.

Amphetamine Testing in the Army

- Amphetamines can be detected in urine for 2-3 days after ingestion.
- The Army tests every specimen for amphetamines.
- The illegal use of amphetamines or any drug goes against Soldiers Values and Warrior Pride.
